

10922 2 the 9s

A well-known trick to know if an integer N is a multiple of nine is to compute the sum S of its digits. If S is a multiple of nine, then so is N . This is a recursive test, and the depth of the recursion needed to obtain the answer on N is called the 9-degree of N .

Your job is, given a positive number N , determine if it is a multiple of nine and, if it is, its 9-degree.

Input

The input is a file such that each line contains a positive number. A line containing the number 0 is the end of the input. The given numbers can contain up to 1000 digits.

Output

The output of the program shall indicate, for each input number, if it is a multiple of nine, and in case it is, the value of its nine-degree. See the sample output for an example of the expected formatting of the output.

Sample Input

[illegible]

Sample Output

[illegible]
